

The attitude horizon, drawn as real files.

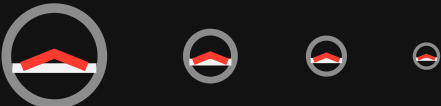

Ring, horizon, and the aircraft mark in Signal Red. Five icon variants, four lockups, and seven rasters — every size drawn at its own stroke weight rather than scaled.

THE MARK

icon.svg — the ring holds it, the horizon establishes level, the wings sit on the horizon. Wide and shallow on purpose.

SIZE LADDER

64 · 32 · 24 · 16px. Use **icon-small.svg** below 24px — same geometry, heavier strokes so it survives.

LOCKUPS

ecomm-copilot

lockup-horizontal-dark.svg — site header, email signature, deck footer. Hairline divider between mark and wordmark; the hyphen stays neutral so the wings hold the only red.

ecomm-copilot

YOUR ECOMMERCE TEAM, AMPLIFIED.

lockup-stacked-dark.svg — covers, cards, social profiles. Carries the tagline.

ecomm-copilot

YOUR ECOMMERCE TEAM, AMPLIFIED.

lockup-stacked-light.svg — the same on white or light paper.

TWO THINGS TO KNOW

The wings must stay wide and shallow. Two earlier drafts failed instructively: wings floating above the horizon read as a face, and a steep narrow chevron read as a mountain. Wide, shallow, and touching the horizon is what makes it an aircraft.

The lockups set the wordmark as live text. Fine on your site since you self-host Inter. Before anything goes to a printer or a third party, convert the type to outlines in a vector editor.
